WOODLEIGH BULLETS

Merchandise and Bullet Features

MERCHANDISE

Woodleigh Loading Manual

Woodleigh Bullets Loading Manual
Comprehensive guide 350 + pages with
loading data for American, European,
British and Double Rifle cartridges plus
the history of Woodleigh Bullets and
Hydrostatically Stabilised bullets.
Compiled by Geoff McDonald, Graeme
Wright and Hans Bossert.

Woodleigh Bullets Caps available in red, black, cammo, navy blue and fluoro orange.

Polo shirts available in black, red, navy, grey, burgundy and orange fluoro.

Cloth Badges

Jack Crouch & Jimmy the German Wirehaired Pointer with his 1st. Sambar taken with 308 Win & Woodleigh 150gr Protected Point.

Mr Keith Fahl with zebra taken with 318 WR bolt action & Woodleigh 250gr Round Nose Soft Nose.

Front Cover

Mr Chris Jauffret with Banteng taken with his Verney Carron Azur PH in 375 flanged magnum & Woodleigh 300gr RNHD & 300gr Hydros.

Mr. Kevin Perry with bush pig taken with his custom 400 H&H & Woodleigh .410" 400gr Round Nose Soft Nose.

HYDROSTATICALLY STABILISED BULLETS

Not recommended for herd situations due to likely shoot through

Woodleigh Hydrostatically Stabilised bullet. Generally accepted as the seventh generation in bullets by virtue of the fact that it incorporates all the best characteristics of both modern solids and expanding bullets. Unequalled straight-line performance. Deep reliable penetration. Large consistent wound channel. Environmentally sensitive construction.

Suitable for game the size of deer through to elephant, this bullet has no peer when hunting in heavy brush. Game can be reliably taken from any angle. Provided the game's vital organs are in your line of sight, you can rest assured that the bullet will reach and destroy them resulting in a humane kill when using a cartridge that is suited for the game being hunted.

As this bullet does not rely on expansion for its killing effect, it side steps the problem of erratic expansion suffered by some other types of expanding monometal bullets.

Another desirable feature is the shallow driving bands and full diameter body.

The driving bands combined with the materials used, keep pressures low and minimise stresses on barrels.

In line with good practise when using this type of bullet in magazine rifles we strongly recommend that all ammunition is cycled through the magazine to ensure that feeding is reliable prior to going on a hunt. If you have a feeding problem, try changing the seating depth.

Loading Tip - Hydrostatically Stabilised bullets generate similar pressure to conventional soft nose bullets. However in keeping with safe loading practice always reduce powder charge by 2 grains then work up.

Right: Mr. Ian McDonnell with Cape Buffalo taken with his 404 Jeffery & Woodleigh 400gr Hydrostatic

Left : Mr. Louis Baum with Asian Buffalo taken with his Gibbs 450/400 & Woodleigh 400gr Hydrostatic

WOODLEIGH BULLETS

Recommended Usage

Recommended Impact Velocities

Woodleigh have recommended impact velocities for all our soft nose bullets. These are listed on our website and printed on the bullet boxes. We recommend a range of impact velocities for each bullet which will give reliable expansion and optimum retained weight. These recommended impact velocities were arrived at after exhaustive field testing on various game. If loading to higher than the recommended velocity you may still get excellent results but it is our experience that driving the bullet within our ranges will give a more predictable result.

Loading Tips - Soft Nose

As a general rule Woodleigh RN and PP bullets generate similar pressures to conventionally constructed soft nose bullets. You can use published data from other bullet and powder manufacturers. For safety, reduce by 5% and work up. Ensure that the case neck has a good grip on the bullet.

Mr. Peter Mayall and Cape Buffalo taken with Heym 500 NE & Woodleigh 570gr Soft Nose. Recovery Inset.

Protected Point Soft Nose

Very popular all round bullet to suit a variety of conditions. The higher ballistic coefficient bullet design has all the excellent qualities of typical Woodleigh Bullets which are highly regarded by serious game hunters. Internal grooves at the nose section strategically weaken the front jacket area for consistent controlled expansion in bullets 6.5mm to 8mm. The small flat nose with minimal lead showing will not deform under recoil in the magazine of bolt action rifles.

Mr Brayden Summers with Tahr taken with his 300 Win Mag & Woodleigh 200gr Protected Point.

Weldcore Soft Nose

Using our jackets, deep drawn from 90/10 gilding metal with internal profiling for controlled expansion, combined with our bonded core process ensures reliable lethality over a broad velocity range.

All Woodleigh expanding bullets use pure lead core material for consistent expansion.

Adrianna Lowe with Asian Buffalo taken with FN Mauser 98 in 404 Jeffery 450gr Round Nose Soft Nose

Full Metal Jacket

The most heavily constructed steel jacketed solids available. Made from extra deep drawing grade steel, clad with 90/10 gilding metal alloy. The jacket is heavy at the nose (0.084") to create extra impact resistance. The base of the bullet is rolled back 90 degrees to provide a double strength heel to prevent core loss on impact.

Woodleigh is the only company worldwide that manufacture a comprehensive range of FMJ bullets suitable for dangerous game.

Loading Tips - Full Metal Jacket

Woodleigh steel jacketed FMJ's generate more pressure than our soft nose bullets for any given load. To assist the barrel's lead to engrave the rifling on the bullet, most Woodleigh FMJ's are .0005" to .001" under nominal diameter. It is important for the case neck to have a good grip on the bullets, especially when loading for dangerous game. Factors which affect the grip are:-Bullet diameter and inside neck diameter. Inside neck diameter is a product of case neck wall thickness, die neck diameter and neck plug diameter. As a general rule, start with a charge 5% below that used for soft nose bullets, and work up.

WOODLEIGH BULLETS

Recommended Usage

Plains Game

For animals over 50Kg (110lb) use calibres from 6.5mm upwards. Our recommendation is to use 150gr in 270, 160gr in 7mm, 180gr - 220gr in 30 cal, 225gr in 338.

Large Thin Skinned Game

Eland, Kudu, Moose, Elk, Bears

Use medium calibres from 338 upwards. We recommend 250-300gr in 338, 286gr-320gr in 9.3mm, & 300gr in 375.

Mr. Tim M'Intyre and Gemsbok taken with his custom FN 9.3 x 62 & Woodleigh 286gr Round Nose Soft Nose

Mr. David Goretzky with bull Elk taken with his 375 Ruger & Woodleigh 300gr Protected Point

Dangerous Thin Skinned Game - Cats

Use good quality soft nose bullets, medium calibres (375) upwards. Large male lions have heavy muscles, again, don't get carried away with light bullet and high velocity. Use a standard calibre (375 300gr or 416 410gr) weight soft nose bullet, or heavier preferably RN type. Woodleigh RN give rapid, controlled expansion and are eminently suitable for this type of game.

The PP's, although a little slower in expanding are also an excellent choice, especially if one bullet is chosen for all round use.

Large Dangerous Game

Elephant, Buffalo, Hippo, Rhino

Use the most powerful cartridge you can shoot confidently, and comfortably handle. For elephant, only use high quality solid bullets for all shots.

For those who prefer homogenous or monolithic solids, we now offer our Hydrostatically Stabilised solid in most popular calibres.

These deliver high shock and excellent deep straight line penetration.

For other heavy dangerous game, we recommend and have proven from much experience, the use of a soft nose bullet for the first shot, followed by solids if needed. Use the heaviest bullets available for your chosen cartridges. Heavy bullets are much more reliable at moderate velocity than light bullets at high velocity.

Good quality solids are essential for second and subsequent shots on other heavy dangerous game. In the case of buffalo the bullet may have to penetrate rear end muscles (which will stop most soft nose) and the large grass packed stomach or rumen bag, to finally reach the vitals of the chest cavity.

Similarly, a rear raking shot will necessitate the bullet penetrating the stomach or rumen bag before reaching the vitals. No soft point made can be relied on to penetrate sufficiently for a successful rear end or raking shot. Also, head or spine shots on a charging animal are very risky. Only good quality solids can be relied on for this, such as Woodleigh clad steel FMJ bullets and Hydrostatically Stabilised solid bullets.

Mr. Anthony Bria and Cape Buffalo taken with his custom 404 Jeffery & Woodleigh 400gr Soft Nose & FMJ.

Mr. Kevin Perry with Hippo taken with his custom 400 H&H & Woodleigh 400gr Round Nose Soft Nose
